DETAILED ACTION

This action is in response to Amendment filed December 2, 2003. Claims 1-4 and 7 have been amended as requested by the applicant.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jiawei Huang on February 17, 2004.

Claims 1-10 of the application have been amended as follows:

1. (Amended) A non-linear optical [material] filter comprising a filter material composed of a pure bismuth film that is sufficiently thin for producing non-linear refraction and non-linear absorption of incident light.
2. (Amended) The non-linear optical [material] filter of claim 1, wherein the pure bismuth film is formed by pulsed laser deposition.
3. (Amended) The non-linear optical [material] filter of claim 1, wherein a thickness of the pure bismuth film is approximately 10.5 nm.
4. (Amended) The non-linear optical [material] filter of claim 1, wherein the pure bismuth film is covered by a top protective layer.

5. (Amended) The non-linear optical [material] filter of claim 4, wherein the top protective layer is transparent.

6. (Amended) The non-linear optical [material] filter of claim 4, wherein the top protective layer comprises Al_2O_3 .

7. (Amended) The non-linear optical [material] filter of claim 1, wherein the pure bismuth film is disposed on a base layer.

8. (Amended) The non-linear optical [material] filter of claim 7, wherein the base layer comprises glass.

9. (Amended) The non-linear optical [material] filter of claim 7, wherein the base layer comprises quartz.

10. (Amended) The non-linear optical [material] filter of claim 1, which is used as a non-linear optical device in an optical method or in an optical apparatus.

Allowable Subject Matter

Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art of record fails to teach or suggest the use of an optical filter wherein the filter element is composed of pure bismuth sufficiently thin to produce non-

Art Unit: 2872

linear refraction and non-linear absorption. The use of bismuth oxide as a filter element is known however the use of pure bismuth as the filter element is novel and nonobvious.

The remaining claims are dependent from claim 1 and are therefore allowable for the same reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments, see Amendment, filed December 2, 2003, with respect to claims 1-10 have been fully considered and are persuasive. The rejection of claims 1-10 has been withdrawn.
